

Side Smarter.

Install wood composition siding faster and easier with the Gecko Gauge™!

Working as a pair, our Gecko Gauge™ for wood composite siding clamps to each siding course — acting as a second set of hands — to gauge and support your next course for nailing.

The patented friction-cam mechanism provides incredible holding power for full 16' siding lengths — reducing fatigue and eliminating the need for layout for fast accurate installation.

With models available for both 3/8" and 7/16" siding thicknesses, the Gecko Gauge easily adjusts at 1/4" increments for 4"-8" reveals.

The Gecko Gauge is proudly made in America as part of our complete line of "Smart Tools Made for Smarter Builders."
